Battle of the Coral Sea (May 4–8, 1942), World War II naval and air engagement in which a U.S. fleet thwarted the Japanese invasion of Port Moresby in New Guinea. The battle, fought primarily between aircraft and naval vessels, foreshadowed the kind of carrier warfare that marked later fighting in the Pacific War.

In April 1943, a young officer arrived at Penshurst to join C Flight, 653 Squadron. He was no ordinary pilot and this was no ordinary RAF outfit. Lyell Munro was a soldier and 653 was an Air Observation Post Squadron whose pilots were Royal Artillery and whose ground crew were RAF. AOP pilots were expert gunners, skilled flyers and incurable rule breakers. Flying from airstrips just behind the front lines, without armament and often with no parachute, they controlled the fire of hundreds of guns and their

enemies learnt to dread the sight of the little green Austers in the skies above the battlefield. An incautious movement, a puff of smoke or a chance flash of reflected sunlight could bring tons of high explosives raining down. They flew alone without ground control, scanning the skies constantly while they directed the guns. Closing at over 250mph, an attacking ME 109 left no time for indecision. Reactions had to be instinctive and evasive action instant. Failure was fatal. After the War ended, the survivors went back into civilian life and few histories mention them or what they did. Lyells is one of only two personal accounts that are known to exist and it is likely that there will be no more. Written for his family and his comrades in C Flight it is a story told without heroics, but with a deep affection for the men with whom he flew and worked.

From an expert in the Pacific theater of World War II comes the tragic story of the pilots who fought the last fight of the war during the first hour of peace. When Billy Hobbs and his fellow Hellcat aviators from Air Group 88 lifted off from the venerable Navy carrier USS Yorktown early on the morning of August 15, 1945, they had no idea they were about to carry out the final air mission of World War II. Two hours later, Yorktown received word from Admiral Nimitz that the war had ended and that all offensive operations should cease. As they were turning back, twenty Japanese planes suddenly dove from the sky above them and began a ferocious attack. Four American pilots never returned—men who had lifted off from the carrier in wartime but were shot down during peacetime. Drawing on participant letters, diaries, and interviews, newspaper and radio accounts, and previously untapped archival records, historian and prolific author of acclaimed Pacific theater books, including *Tin Can Titans* and *Hell from the Heavens*, John Wukovits tells the story of Air Group 88's pilots and crew through their eyes. *Dogfight over Tokyo* is written in the same riveting, edge-of-your-seat style that has made Wukovits's previous books so

successful. This is a stirring, one-of-a-kind tale of naval encounters and the last dogfight of the war—a story that is both inspirational and tragic.

China. Annotation 2005 Book News, Inc., Portland, OR (booknews.com).

Much has been written about the Battle of the Somme. From July through late November 1916, British, French, and German armies fought one of the costliest battles of the twentieth century. Well over a million casualties and only a few miles of ground gained by the Allies were the result when the battle ended. Little, however, has been written about the second battle which occurred simultaneously, this one in the skies above the Somme, where for the first time in the history of warfare a deliberate attempt was made to control the sky. The British Royal Flying Corps, under the resolute command of General Sir Hugh Trenchard, fought to gain air supremacy from the German Air Service. Trenchard believed that the best way to support the ground force was to dominate and control the sky above the battlefield. This air campaign was critical because of its impact on the doctrine and theory of air warfare which followed it. This study examines the efforts of the Royal Flying Corps to gain air supremacy against the German Air Service before and during the Battle of the Somme.

China's military build-up, particularly the expansion of its long-range nuclear forces and its development of 'anti-access/area-denial' (A2/AD) capabilities, poses a serious threat to both the American position in East Asia, and the security of other regional powers. The growth of these forces challenges Washington's ability, and perhaps its willingness, to project power into the region. This could call American security guarantees into question, eventually undermining

the United States' place as the dominant Asia-Pacific power. Left unchecked, perceived shifts in the regional military balance away from the US and its allies towards China could also raise the risks of miscalculation and deterrence failure.

Charles Amory Beach wrote the Air Service Boys series for the Stratmeyer syndicate from 1918 to 1920. There are six books in the series including Air service boys over the enemy's lines: or, The German spy's secret, Air Service Boys Over the Rhine Or Fighting Above the Clouds, Air service boys flying for France, or, The young heroes of the Lafayette, Air service boys flying for victory, or, Bombing the last German stronghold, Air Service Boys in the Big Battle Or, Silencing the Big Guns, and Air service boys over the Atlantic: or, The longest flight on record.

Noted aviation historian Robin Higham examines the evolution of the Armée de l'Air and RAF during the interwar period. Although France and England shared a mutual enemy in Germany, the development of the air forces of in each nation shared few commonalities. Higham demonstrates that the Armée de l'Terre dominated strategic and doctrinal planning in France. The resulting emphasis on traditional land warfare, combined with the volatility of French politics in 1920s, blunted the development of French air forces. By 1940, they were ill prepared, technologically inferior, and out manned when the Luftwaffe aircraft darkened the skies over the French countryside. Although the causes of the defeat of France in 1940 have been debated by historians, none have focused on the role and place of the Armée de l'Air in that defeat. Historians of France have been much more comfortable arguing about politics and the Armée de Terre. As Higham illustrates, however, it is important understand the impact of the development of the Armée de l'Air, its doctrine, equipment, personnel, and budgets.

Comparatively, the success of the Royal Air Force in the skies over Britain was due largely to the fact that the independent RAF evolved into a sophisticated, scientifically based force, supported by consistent government practices. Higham's thorough examination, however, finds the British not without error in the two decades that followed the Treaty of Versailles. But strong government support and technological innovation during this period paved the way for success once the war began.

The Battle of France saw German forces sweep across the Low Countries and towards Paris, crushing Allied resistance in just six weeks. From Fall Gelb and the British withdrawal from Dunkirk to the decisive Fall Rot, this new supplement for Bolt Action allows players to take command of the bitter fighting for France, and to refight the key battles of this campaign. Linked scenarios and new rules, troop types, and Theatre Selectors offer plenty of options for novice and veteran players alike.
