Tri acidic bases are those which have three 'OH' group per unit as $\text{Al}(\text{OH})_3$ and $\text{Fe}(\text{OH})_3$, their one mole requires three mole of a base (NaOH) for complete neutralization. 365 366 367 Answer

Answers about Acids and Bases

Liquids that measure 0-7 are acids with 0 being the strongest. Bases will measure from 7-14 with 14 being the strongest. A pH of 7 means that the liquid is neutral. Distilled water has a pH of 7. The scale is a convention for measurement and some sources argue that acids can be negative figures and bases can be stronger than 14.

Our general ideas regarding acid and alkali based on Arrhenius concepts in which an acid is a compound molecule that yield H^+ ion in water solution and the base is a compound molecule yields OH^- in water solution and utilization readily form solvent or water. Hence Arrhenius's theory very useful for explaining acid and bases in water solution but can't explain the strength in glacial acetic acid or ammonia solution.

The chemistry of acids and bases and buffers is an important area. For example, the relative strengths of acids influences the formation of nitronium ions in the nitration of benzene and the understanding of pH and buffers is essential in biology. Very early in the history of chemistry, many substances were designated as acids, bases, and salts.
