Florida officials have released new 911 audio from the moments following the deadly Surfside condo collapse. CNN's Rose Flores reports.

Completely revised and expanded from four to five volumes, this new edition of the Handbook of Parenting appears at a time that is momentous in the history of parenting. Parenting and the family are today in a greater state of flux, question, and redefinition than perhaps ever before. We are witnessing the emergence of striking permutations on the theme of parenting: blended families, lesbian and gay parents, and teen versus fifties first-time moms and dads. One cannot but be awed on the biological front by technology that now not only renders postmenopausal women capable of childbearing, but also presents us with the possibility of designing babies. Similarly on the sociological front, single parenthood is a modern day fact of life, adult child dependency is on the rise, and parents are ever less certain of their own roles, even in the face of rising environmental and institutional demands that they take increasing responsibility for their offspring. The Handbook of Parenting concerns itself with: *different types of parents--mothers and fathers, single, adolescent, and adoptive parents; *basic characteristics of parenting--behaviors, knowledge, beliefs, and expectations about parenting; *forces that shape parenting--evolution, genetics, biology, employment, social class, culture, environment, and history; *problems faced by parents--handicap, marital difficulties, drug addiction; and *practical concerns of parenting--how to promote children's health, foster social adjustment and cognitive competence, and interact with school, legal, and public officials. Contributors to the Handbook of Parenting have worked in different ways toward understanding all these diverse aspects of parenting, and all look to the most recent research and thinking in the field to shed light on many topics every parent wonders about. Each chapter addresses a different but central topic in parenting; each is rooted in current thinking and theory, as well as classical and modern research in that topic; each has been written to be read and absorbed in a single sitting. In addition, each chapter follows a standard organization, including an introduction to the chapter as a whole, followed by historical considerations of the topic, a discussion of central issues and theory, a review of classical and modern research, forecasts of future directions of theory and research, and a set of conclusions. Of course, contributors' own convictions and research are considered, but contributions to this new edition present all major points of view and central lines of inquiry and interpret them broadly. The Handbook of Parenting is intended to be both comprehensive and state of the art. As the expanded scope of this second edition amply shows, parenting is naturally and closely allied with many other fields.

Starting with a step-by-step guide of how to become a Florida resident, the book covers such valuable topics as Florida's homestead law, how to qualify for in-state college tuition, and simple things to do to save thousands of dollars in property insurance premiums.

This book illuminates the complex and constantly shifting social and cultural dynamics that shape people's identity. Specifically, the volume focuses on the intersections of gender with, culture and identity, and at different historical epochs; on the way men and women define themselves and are defined by diverse peoples and cultures across time and space in sub-Saharan Africa. The discussions presented in this anthology primarily focus on 'being' as 'a state' or 'condition', defined by sex identity, and how this identity shifts, and hence 'becoming', assuming diverse meanings in disparate societies, contexts, and time. The discourse, therefore, moves from how the perception of the self in cultural and historical contexts has informed actions and at some other times shaped interpretations given to historical facts, to how changing economic realities also shape the definitions and constructions of social and relational issues in Sub-Saharan Africa. The historical trajectories of Islamic religion, colonialism and Christian missionary activities in sub-Saharan Africa have shaped the worlds of the peoples of the region and impacted on gender relations.

" • Can I contribute to science? • Do I like to work on the problems of science? • How do scientists know what they know? • Would I like to be|become a scientist? These are questions that interest new science students. The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning. They argue that students are typically taught from a disciplinary perspective of science. Using this lens students are viewed as people who need to learn a particular canon of information, methods, and ways of knowing about the world—a perspective that may be useful for practicing

scientists, but not ideal for young learners. In this disciplinary approach to science education there is little room for development as a scientist. In contrast, the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity. The historical explorations, theoretical insights and practical advice presented here are appropriate for all ages and educational settings. In *Being and Becoming Scientists Today*, the authors provide: new tools for thinking about science, ideas for how to reveal the multiple stories of knowledge production to learners, and approaches to teaching science as a collective process rather than a series of contributions made by (famous) individuals. In these ways, the authors promote the idea that all science learners contribute to the science in our lives."

In *Being and Becoming*, Fenwicke Lindsay Holmes, one of the leading authors and speakers in the New Thought movement, discusses the spiritual life, the afterlife, and what part humans play in the universe. Seeking to give readers the succor of truth and profundity, *Being and Becoming* offers reflections on what human consciousness and reality mean in the context of God. The nature of the Lord's Absolute Being, every human soul as a component of the Cosmic Mind, and what virtue and goodness comprise in reality is examined. The wide-ranging and thoughtful words of Fenwicke Holmes draw upon wisdom from across the epochs of human civilization. The Bible as well as Eastern texts are quoted, as is Holme's own poetry on the spiritual realm and the physical and emotional interactions of God with mankind. In all, this book offers comprehensive program of New Thought topics and contemplation. Holmes would go on to found New Thought organizations both in the United States and internationally. He was particularly influential in founding and growing Seicho-no-Ie, a Japanese New Thought group which today claims some 1.5 million followers. In later life, Holmes remained a presence in the movement, giving talks on spiritual philosophy and the purpose of mankind in the cosmos in person, and in radio and TV broadcasts.

As many as 100 billion neurons make up the human nervous system - a system that is incredibly complex, and a fundamental part of what makes us who we are. But there is far more to human beings than biology. Many academic disciplines study the human condition and there are many schools of thought within that study. We must also appreciate that the study of human nature did not begin in contemporary times. History is full of texts that offer detailed explorations of the human condition. However, no consensus has yet emerged. Consensus or not, those working towards religious and spiritual formation pursue the transformation of their communities. This book offers a fuller understanding of some of the common views of human nature and also insights into how we might utilise this knowledge in our ministries - ministries that strive towards the spiritual being and becoming of our world.

With foreword by Rev. Dr. Jane Claypool "...A monumental achievement. Every minister in the field will want to have and use a copy right now!" The definitive cross reference between *The Science of Mind* by Ernest Holmes and the Holy Bible. With over 750 references to Bible verses, this reference is a must have for ministers, translators, and teachers. Completely revised and updated to include other source references! Compliments existing material on the Allegorical Bible, *Rescuing the Bible from Fundamentalism* and all entry level classes with the textbook.

A History of Psychology places social, economic, and political forces of change alongside psychology 's internal theoretical and empirical arguments, illuminating how the external world has shaped psychology 's development, and, in turn, how the late twentieth century 's psychology has shaped society. Featuring extended treatment of important movements such as the Enlightenment and the Scientific Revolution, the textbook approaches the material from an integrative rather than wholly linear perspective. The text carefully examines how issues in psychology reflect and affect concepts that lie outside the field of psychology 's technical concerns as a science and profession. This new edition features expanded attention on psychoanalysis after its founding as well as new developments in cognitive science, artificial intelligence, and behavioral economics. Throughout, the book strengthens its exploration of psychological ideas and the cultures in which they developed and reinforces the connections between psychology, modernism, and postmodernism. The textbook covers scientific, applied, and professional psychology, and is appropriate for higher-level undergraduate and graduate students.
