## Flooring System Paper Test

### **Flooring System**

The term 'flooring' refers to the lower enclosing surface of spaces within buildings. This may be part of the floor structure, such as the upper surface of a concrete slab or floor boards, but typically it is a permanent covering laid over the floor.

### **Types of flooring - Designing Buildings Wiki**

Introduction According to Approved Document C, a floor is the 'lower horizontal surface of any space in a building, including finishes that are laid as part of the permanent construction.' A floor typically

provides: Structural support for the contents of the room, its occupants, and the weight of the floor itself.

### **Types of floor – Designing Buildings Wiki**

The construction system is most efficient for column grids of approximately 9 m by 9 m. The units provide a flat soffit. For semi-exposed applications, such as car parks, precast units may be a more durable alternative than steel decking (although with the correct detailing and coatings it is certainly possible to use decking in such applications).
