Women's Movements in Asia is a comprehensive study of women's activism across Asia. With chapters written by leading international experts, it provides a full overview of the history of feminism, as well as the current context of the women's movement in 12 countries: the Philippines, China, Indonesia, Japan, Burma, Singapore, Vietnam, Malaysia, Thailand, Cambodia, Hong Kong, Korea, India and Pakistan. For each of these countries the manner in which feminism changes according to cultural, political, economic and religious factors is explored. The contributors investigate how national feminisms are influenced by transnational factors, such as the women's movements in other countries, colonialism and international agencies. Each chapter also considers what Asian feminists have contributed to global theoretical debates on the woman question, the key successes and failures of the movements and what needs to be addressed in the future. This breadth of coverage, together with suggestions for further reading and watching, and an integrated cross-national timeline makes Women's Movements in Asia ideal for use on courses looking at women and feminism in Asia. It will appeal both to students and specialists in the fields of gender, women's and Asian studies.

This entertaining visual celebration offers a closeup look at the carousel not only as amusement but as cultural icon and craft. Rare historical photographs portray America's earliest wooden carousels, their creators, and the shops where they were carved. Full-color portraits display fanciful pigs, frogs, and tigers as well as an array of magnificent decorated horses.

Intended for upper-level undergraduate and graduate courses in chemistry, physics, mathematics and engineering, this text is also suitable as a reference for advanced students in the physical sciences. Detailed problems and worked examples are included.

Boundaries of Evolution describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs. The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup. The second is the problem of explaining how the first single-celled eukaryote evolved from a prokaryote. Mathematical improbabilities of evolutionary theory to scale the first two cliffs, in the time available, are demonstrated. The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi-celled eukaryotes could have quickly evolved from single-celled eukaryotes. Random mutations occurring in DNA, accepted or rejected by natural selection, are hailed as the source of advancement for the increase in biotic complexity. The most common time for mutations to occur in the DNA is during replication. Therefore, evolutionary advancement should occur faster in biota with the most frequent replication cycles. If both evolutionary theory and the fossil record are correct, prokaryotes, which replicate in as little as 20 minutes took 2 billion years to evolve the first single-celled eukaryote. Single-celled eukaryotes, generally having shorter reproductive times than multi-celled eukaryotes, took another billion years to evolve the first multi-celled eukaryote. Then during Cambrian times, the multi-celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time. How could this be? Other inadequacies of Darwin's theory are presented for everyone to see.

Based on the most current nutritional information, this concise guide offers new mothers a focused introduction to feeding babies healthy, nutritious foods during their first 12 months of life. With whimsical illustrations and clever recipe names—such as "Cereal Symphony" and "Adam's Eggless Bananawama Muffins"—this handbook even introduces the concept of becoming the executive chef for any parent's new 24-hour home bistro. Filled with colorful asides such as "Foolish Fats," "Funky Fruits," and "Meat Monsters," this compendium is ideal for both working and stay-at-home moms, eliminating the stress from a baby's first year by blending the basics of good nutrition with sound advice. Tips are offered throughout to help parents develop an approach to food that is easy, organized, and fun. Features on shopping and topics such as how to read a food label are also included.

Ninah Huff, the teenage granddaughter of the founder of an isolated religious community, causes controversy when she is discovered to be pregnant with what she claims is a holy child

A comprehensive and granular insight into the challenges of promoting rational medicine, this book serves as an essential resource for health policy makers and researchers interested in national medicines policies. Country-specific chapters have a common format, beginning with an overview of the health system and regulatory and policy environments, before discussing the difficulties in maintaining a medicines supply system, challenges in ensuring access to affordable medicines and issues impacting on rational medicine use. Numerous case studies are also used to highlight key issues and each chapter concludes with country-specific solutions to the issues raised. Written by highly regarded academics, the book includes countries in Africa, Asia, Europe, the Middle East and South America.

Well known that mathematics and physics have problems in their development. Only one mathematician, Morris Kline, discovered illogicality of development of mathematics. Despite this, he attempted to justify illogicality in math by fruitfulness of usage of mathematics in physics, instead to stay problem about illogical development of physics. Here is discussing inconsistencies of undefined notions which are reasons of paradoxes. Main initial notion of mathematics is notion of infinity, and it has inconsistency and this inconsistency is distributed to derived notions of infinitesimal and continuity. Those notions related to almost all branches of mathematics which used physics. Also in work is considering miss inconsistencies of Euclid's and non-Euclid's geometries. A lot approaches like "physics is geometry or geometry is physics" was and is ignoring those inconsistencies of geometries.

For fans of the dark comedy film Tie Me Up, Tie Me Down comes an erotic exploration in domination and submission where Ivy League students let their naughtiest desires run wild... If you think my besties Lex, Taddy, and Vive have had some bad luck earlier this year, cut to me at Glamorama. Last thing I remembered was dancing with Diego and Miguel from my English class, when the room started... spinning. And not in a good way! We got sick. Think Regan in The Exorcist. Taddy was rushed to the hospital. Holding on for dear life, I was carried out by the boys and taken back to their dorm. Now I'm waking up in Diego's bed and Miguel keeps staring at me from across the room. I've wanted to get into these dudes' pants since the first day of class. But Diego told me he likes to be tied up and-wait for it—spanked. WTF! The news on TV reports that last night we all got roofied. And Vive just texted me saying that someone is out to kill her. Could this semester get any more bizarre? --Blake Morgan, college freshman, gay best friend, virgin The Undergrad Years is a naughty new adult contemporary miniseries about first loves, independence, and everlasting friendships.

"God's covenant with his people is an unfolding historical drama with personal and earthly dimensions that are often overlooked. In this study of the meaning and scope of the covenant, Michael D. Williams highlights the goodness of the physical realm and God's redemptive intentions for his creation."-- from back cover.
