work? This book is for you. Be bold. Take on your project. This book will hold your hand every step of the way and guide you to success. YOU CAN DO IT. Why does an Anniversary Clock stop Working? Most likely it is because the suspension spring is broken. I will teach you how to replace it. Often, the works are dirty, need oiling or most likely both. When the clock stops, think of it as "the oil light is on". It's a "cry for help". Without oil, the metal parts grind on each other causing serious wear and damage. Oil also attracts dust which can make the oil "gummy" and add drag to its operation until it can no longer overcome the friction. If a clock is oiled regularly [every three to five years], chances are you will only ever need to re-oil your clock. If the clock is allowed to run until it stops, the only sure way to service it is to remove the works from its case, dismantle the parts, clean, service, and put the movement back together with fresh oil and correct adjustment. This book will teach you how to do all this.

Since their introduction around 1780, Vienna Regulator clocks became a familiar style in homes and public spaces around Europe and the world. Produced in Vienna, Austria, the forms have moved from their early and transitional designs to serpentine, altdeutsch, Baroque, and factory-made types with one-, two-, and three-weight movements. In continuous production until the 1930s, they continue to be popular with collectors and decorators today. A value guide is included.
