recommendations for in-class and extension activities and project ideas. Chapter PowerPoint presentations, chapter tests and a comprehensive exam are available for download from the AAPC Publishing website.--Publisher.

Sending a son or daughter off to college is daunting and fear-provoking experience for most parents, but if your child has an autism spectrum disorder, the challenge is magnified many times over. Even high-functioning students with excellent academic preparation face difficulties in higher education, primarily related to communication, social skills, and sensory-based issues. For many, the accommodations and special interventions that supported them in high school will no longer be available on a college campus. This parent-friendly book, made especially so because it is written by parents, who also are autism professionals, takes the fear and mystery out of the college experience. Learn how to select the right campus, how to work with Disability Services staff, what legal protections apply, how to prepare your son or daughter to be an effective self-advocate on campus, what assistance can be reasonably be expected from residence hall managers, faculty, and much, much more.

Combining their years of experience working with individuals on the autism spectrum, both here and around the world, authors Vera Bernard-Opitz and Anne Häußler bring teachers and other professionals practical ideas and teaching methods for offering visual supports to students with autism spectrum disorders and other visual learners. With hundreds of colorful illustrations and step-by-step directions, this book lays the foundation for how to structure teaching environments, as well as offers countless examples of activities for students, ranging from basic skills, to reading and math, to social behavior.

This title recognizes the importance of offering stabilization strategies that afford students a better regulated body, often enabling students with classic autism to increase their time in school, most of them working up to full-day participation.

Autism is a word most of us are familiar with. But do we really know what it means? Children with autism are challenged by the most essential human behaviors. They have difficulty interacting with other people-often failing to see people as people rather than simply objects in their environment. They cannot easily communicate ideas and feelings, have great trouble imagining what others think or feel, and in some cases spend their lives speechless. They frequently find it hard to make friends or even bond with family members. Their behavior can seem bizarre. Education is the primary form of treatment for this mysterious condition. This means that we place important responsibilities on schools, teachers and children's parents, as well as the other professionals who work with children with autism. With the passage of the Individuals with Disabilities Education Act of 1975, we accepted responsibility for educating children who face special challenges like autism. While we have since amassed a substantial body of research, researchers have not adequately communicated with one another, and their findings have not been integrated into a proven curriculum. Educating Children with Autism outlines an interdisciplinary approach to education for children with autism. The committee explores what makes education effective for the child with autism and identifies specific characteristics of programs that work. Recommendations are offered for choosing educational content and strategies, introducing interaction

with other children, and other key areas. This book examines some fundamental issues, including: How children's specific diagnoses should affect educational assessment and planning How we can support the families of children with autism Features of effective instructional and comprehensive programs and strategies How we can better prepare teachers, school staffs, professionals, and parents to educate children with autism What policies at the federal, state, and local levels will best ensure appropriate education, examining strategies and resources needed to address the rights of children with autism to appropriate education. Children with autism present educators with one of their most difficult challenges. Through a comprehensive examination of the scientific knowledge underlying educational practices, programs, and strategies, *Educating Children with Autism* presents valuable information for parents, administrators, advocates, researchers, and policy makers.

Data collection is one of the critical elements of an effective, efficient, and accountable program that supports student development and learning. However, many intervention teams struggle to develop reasonable and sustainable methods of gathering information about student performance and progress. Now comes *SHOW ME THE DATA!* This must-have resource consists of a brief discussion on data collection accompanied by a CD containing a comprehensive compilation of data sheets to help make that once-dreaded task easier and simpler. The data sheets are of two types: generic forms appropriate for students of any age and/or ability and forms focusing on specific skills appropriate mostly for young children or children with significant cognitive delays. Forms may be customized for particular programs and individual students. Finally, to help teams figure out what to do with the data once they have been collected, samples of completed data sheets and easy-to-use graphs are included as a model for how teams can display their data visually and evaluate the effectiveness of intervention and efficacy of their program and/or intervention.
